

You're always in control with Delta Climate Control.

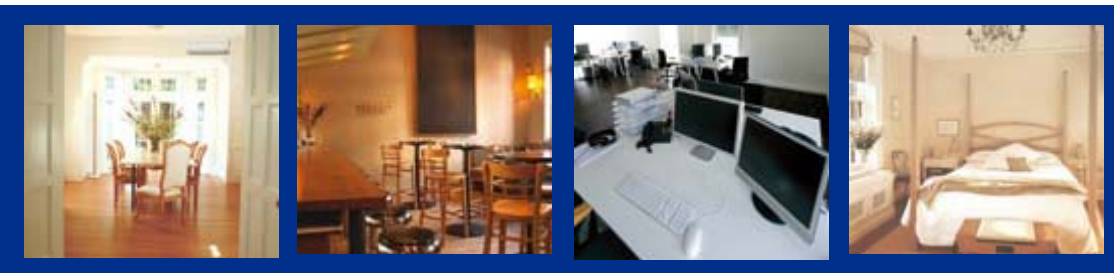

A breath of fresh air from Delta

Delta are experts in Refrigeration, Air Conditioning, Eco Heating and Catering Equipment. Established in Kings Lynn, Norfolk since 1995, we are now based in southern Scotland. With installation teams in Norfolk, Carlisle and Glasgow we work with customers across the UK.

We are distributors for Mitsubishi, Hitachi and Artel and we pride ourselves on industry leading customer service and competitive, transparent prices for both products and Service & Maintenance.

We will work with you to understand your particular needs in order that we can recommend the product that's perfect for you. We'll make you aware of any relevant grants or enhanced capital allowances. Extended warranties are usually offered as standard and our aftersales is responsive and honest. Our service and maintenance packages are tailored to your needs, with prices that would be very hard to beat!

For more information about our products and services please contact Michael Cosham on 01576 300 531 or email michael@deltarefrigeration.co.uk

Energy efficient heating and cooling.

There are so many benefits when you choose a Heat Pump system from Delta Climate Control:

- up to five times more energy efficient than a gas condensing boiler
- they'll warm a large room in around 15 minutes
- they'll rapidly heat or cool at the touch of a button
- very quiet, discreet and easy to operate
- perfect for evenly heating large areas like halls or clubs

Cool air conditioning in Summer.

Incredibly efficient heating in Winter.

With Delta you're in complete control!

Grants available.

Up to 50% or £100,000 grants for community groups, charities and public sector organisations.

The Energy Saving Trust are very keen to support organisations using renewable energy systems, which is why they are offering generous grant support to help people install them.

Here's what they say about air source heat pumps systems:

The benefits of air source heat pumps:

- Reduce your fuel bills:** air source heat pumps run on electricity, so there's no need to pay for gas, oil or solid fuels to heat your home.
- Cut down on wasted electricity:** heating your home with an air source heat pump is much more efficient than using electric radiators.
- Save space:** an air source heat pump system is compact, and requires no storage space for fuel

We would be happy to chat you through some of the feedback and running cost savings our village and community hall clients have given us.

The way heat pumps work really suit large areas like halls and if you are using traditional electricity heating at the moment you could find your running costs slashed by up to 80%, meaning your new heating system could pay for itself in only few years.

Give us a ring for a chat about heating your property. We're happy to come out and meet you - we don't do hard sell or pressure at Delta Climate Control. We'll simply talk you through the options and show you one of these ultra efficient systems.
